Structural Engineering

The area of structural engineering is very broad and provides numerous analysis and design opportunities within the industry, but we believe our clients are better served when they can receive consulting services that are specific to particular needs, such as; foundation design, silo design, structural steel design, concrete design, etc.

Engineering Rehabilitation

We strongly believe in protecting and restoring existing structures for future benefits. Having the right team of professionals who can not only assess existing structural conditions, but able to integrate cost-benefit analysis in their decision making process is vital to the client and broader community. Our rehabilitation experience in the parking industry is reflective of this mindset.

Engineering Management

We believe that our experience in project management, engineering consulting, capital improvement and life cycle cost analysis set us apart from the typical engineering firm. Our decision making process is heavy weighted our clients overall strategy and objectives. We believe it is very important to have a team professionals like those at Cohesive Engineering at the table early in the decision making process. It is our experience that these approaches will always improvement the project outcome.
